You don’t compromise in the field - neither should your drone. The eBee X is our most advanced fixed-wing drone that’s designed to meet all your surveying and mapping needs. Whether your project site is small or vast, straightforward or complex, the eBee X goes the distance while helping you boost the quality, efficiency and safety of your data collection.

“I immediately felt comfortable flying the eBee X and the senseFly Aeria X is a phenomenal mapping camera. As for that material on the body, I can’t believe how strong that stuff is!”

Scott Hiebert, CEO, Green Aero Tech

Up to 90 minutes flight time* Capture more - efficiently cover up to 500 ha (1,235 A) while flying at 400 ft.

Down to 1.5 cm high-precision accuracy Available RTK/PPK allows you to achieve the absolute accuracy your project requires, without GCPs.

Unmatched versatility Compatible with more than seven sensors, eBee X is capable of getting the job done no matter the requirements.

Lightweight and durable Designed to operate in the harshest conditions, thanks to its optimized airframe and ultra-tough under-body skin.

Safe and easy to use Simply plan your mission. Launch the drone and collect critical project data in minutes.

*Referenced flight time achieved with endurance battery and S.O.D.A. sensor.
SUITS EVERY MAPPING JOB

From surveying mines and complex construction sites to crop health analysis and disaster response, the eBee X is suited for any job thanks to its wide-range of groundbreaking, interchangeable cameras.

Fly Advanced Operation Over Urban Areas

**Stuning 3D Reconstructions**
Wide field of view ensures excellent 3D mapping results in vertically-focused environments. By using aerial photogrammetry, you can map a whole city and use the model for urban planning tasks, project development, vertical surfaces measurements and more.

**Absolute Accuracy**
With the capability to use RTK during the flight and PPK after, you can ensure more reliability with the accuracy you obtain. By using aerial photogrammetry, you can get the precision you need in a fraction of the time required, in comparison to using terrestrial tools.

**Safe and Easy Workflow**
The eBee X's light weight makes it the perfect tool to fly safely for advanced operations such as flying over people. eMotion will help you create a safe mission plan and ensure reliable data capture for a successful mission.

Payload Used: S.O.D.A. 3D
Surface Mapped: 501 ha (1238 A)
“A drone’s flight management software defines your experience—if this is complicated or confusing, operations can quickly become a chore. eMotion is different: it’s advanced, scalable drone software that anyone can use.”

Scott Hiebert, CEO Green Aero Tech

Beginner-friendly, yet packed with advanced features to tackle the toughest jobs, our eMotion flight planning software optimizes every step, helping to get your eBee X in the air quickly and with ease, so you can focus on what’s important—collecting and analyzing site-critical geospatial data.

How it works

With eMotion, flights are built using mission blocks. Just choose your block, highlight the region you want to map, define key settings, and eMotion auto-generates your drone’s flight plan. Multi-flight missions are supported and you can activate/import elevation data for even safer, terrain-accurate flights.

Upload your flight plan wirelessly to your drone. After a simple hand launch, your eBee X drone will then fly, capture images and land by itself.

eMotion’s built-in Flight Data Manager automatically handles the georeferencing & preparation of images required for post-processing in software such as Pix4Dmapper.

Compatible photogrammetry software

Pix4Dmapper/Pix4DCloud/Pix4Dmatic/Pix4Dfields, Agisoft PhotoScan, Esri Drone2Map, DroneDeploy, Trimble Business Center and Bentley ContextCapture.
Reduce downtime and maintenance costs

The eBee X was designed to reduce both delays and repairs thanks to its modular design that lets you swap out parts, as needed.

Maintenance made easy
Get your senseFly drone serviced locally, thanks to our global network of authorized service centers.
All you need to survey with your eBee X.
On your back.

The eBee X backpack is a smart and durable way to carry everything you need to transport your new senseFly drone into and out of the field.

- **All your gear in one spot**
  Safely store and transport everything you need to operate your eBee X.

- **Lightweight and durable**
  Comes with a rain cover to ensure your drone stays protected from the elements.

- **Laptop pocket**
  The eBee X series backpack features a helpful 45 cm x 45 cm (17.7 in) laptop pocket.

- **Comfort and security**
  Ergonomic and adjustable straps help keep you comfortable while transporting your drone.
The senseFly eBee X comes with...

1x eBee X Drone
2x Spare Propellers
10x Spare Propeller attachment rubber bands
2x Lithium-Polymer Standard Batteries
1x Spare Pitot Kit
1x USB Ground Modem
1x Backpack
2x Spare Propellers
1x Lithium-Polymer Battery Charger
3x Spare Pitot Kit
1x USB Cable

Go further, fly longer with senseFly accessories

Remote Control
Operate your eBee X drone manually with the available remote control

GeoBase
Enable high-accuracy workflows with this plug-and-play GNSS instrument

USB Ping
View live air traffic data directly within eMotion

Spare Pitot Pro Kit
Contains 3 spare pitot tubes. The pitot tube is used by the eBee X to measure wind speed and direction for course correction as well as landing optimization

Radio Tracker
Safeguard against unexpected aircraft signal loss while flying in high winds, mountainous areas or very large areas out of line of sight

RTK / PPK Activation
Achieve absolute accuracy of down to 1.5 cm (0.6 in) with available RTK/PPK

Endurance Battery
Available Endurance Batteries allow for flight times of up to 90 minutes

Endurance Extension
Fly up to 90 minutes in a single flight (Endurance Battery required)

Extended Warranty
1-year warranty extension

Hard Case
For extra protection in harsh environments

Certified Operator Program

Accuracy is the measure of success. Get the most out of eBee X with active RTK/PPK

A surveyor’s job is to capture accurate data. With boots on the ground, this responsibility is almost entirely up to the surveyor and their level of expertise with the equipment and jobsite. The eBee X is an advanced drone platform that makes your surveying process faster, safer and more efficient.

While laying ground control points (GCPs) has been a necessary step in drone surveying workflows from the beginning, advancements in GNSS technology have led to the evolution of real-time kinematic (RTK) and post-processing kinematic (PPK) methods. Each of these methods have their own benefits and can improve drone pilot workflows. The following is a quick look at the use of GCPs and the added benefit of active RTK/PPK.

**Ground Control Points (GCPs)**

A Ground Control Point is a location or object on the ground that has precisely known coordinates. GCPs are used to accurately geo-reference and align projects from relative accuracy—one to two meters—to absolute accuracy—two to five centimeters.

This method has been used for years and trusted to consistently produce a high level of precision and overall accuracy. In addition, GCPs allow the production of defensible quality report to prove the validity of technology and are used for consistent ground truthing of a project’s accuracy.

There are some downsides however, as GCPs can take as much as four times longer to setup in comparison to RTK and large worksites may require an entire crew to set points. This can be a dangerous endeavor in certain environments and may require additional equipment including a GPS rover, base, VRS network license in addition to the spray paint and targets.

GCPs have been a proven method of accuracy for years, but with safer and faster methods available, it should be used only when RTK and PPK are not possible.

**Real-Time Kinematic (RTK)**

Real-time kinematic is a technique used to enhance the precision of position data derived from satellite-based positioning systems, which relies on a single reference station or interpolated virtual station to correct geotagged locations while in flight. In other words, RTK is a correction method that enhances GNSS precision.

RTK is advantageous for many surveying professionals because it increases safety. The technique eliminates the need for teams to maneuver through dangerous terrain to set GCPs while also efficiently saving time and productivity. RTK provides corrections to the drone onsite and is ideal for geo-tagging in absolute accuracy throughout flights in real-time. No GNSS post-processing is necessary with real-time correction.

This technique does require a base station and a consistent connection to process data in real-time. While this extra piece of equipment provides the benefit of increased accuracy, it also has a moderate possibility of malfunctioning.

The RTK methods work with air communication with the drone. If there’s more than three kilometers between the drone and the ground station, or if there are obstructions such as trees or mountains, there’s a chance it will lose signal.

As an operational best practice, it’s ideal to use RTK on flights in open terrain and within two or three kilometers of the ground station to maintain the communications link. These flights can deliver highly accurate results without the need for using GCPs. This is an extremely helpful advantage for land surveyors working in dense vegetation, crops and other hard to distinguish terrain.

**Post-Processing Kinematic (PPK)**

An alternative method to RTK is post-processing kinematic. This kinematic technique corrects geotag accuracy after capturing and uploading drone data. The data is corrected in the flight data manager and then processed in the cloud. PPK also offers a safety advantage because similar to RTK, the technique eliminates the need for teams to maneuver through dangerous terrain to set GCPs. Also, there’s an even greater timesaving in comparison to RTK-to-GCP because less time is spent on-site preparing the RTK connection.

Setup is easier because no cable or Bluetooth connection is required with the base station. PPK is more dependable than RTK because it does not depend on signal strength or GNSS information from the base station in real-time.

This method offers more flexibility in flight since a connection isn’t required for data capture however, additional processing time will be needed post-flight to georeference the data. The PPK method is ideal for longer flights, especially BVLOS missions. The longer the flight, the greater chance there is of losing signal to the connection needed for RTK.

**In Summary**

When considering factors such as ease of use, time and expense, the advantages of an RTK/PPK-enabled drone become more apparent. Difficult terrain, unreachable spots and safety concerns can be deterrents for using GCPs, not to mention the amount of time it could take to plan and measure each. The integration of GNSS technology within the drone industry has helped improve the workflow of drone pilots by making mapping missions more accurate, efficient, cost-effective and—most importantly—safe.
**Hardware Datasheet**

### eBee X

**Wingspan** 116 cm (45.7 in)

**Material** Expanded Polypropylene (EPP)

**Underbody skin** Curv® Polypropylene thermoplastic composite

**Weight (Empty)** 0.8 kg

**Max Take-off weight** 1.6 kg

**Backpack dimension** 75 x 50 x 29 cm (29.5 x 19.7 x 11.4 in)

**Motor** Low-noise, brushless, electric

**Detachable wing** Yes

**Empty backpack weight** 4.6 kg

### Coverage & accuracy

- **Nominal coverage at 122 m (400 ft)** 220 ha (550 A) with senseFly S.O.D.A. and without Endurance Extension
- **Max. nominal coverage at 122 m (400 ft)** 500 ha (1,235 A) with senseFly S.O.D.A. 3D and with Endurance Extension
- **Ground sampling distance at 122 m (400 ft)** 2.5 cm/px (1.0 in/px) with senseFly Aeria X
- **Lowest ground sampling distance** 1.0 cm/px (0.4 in/px) with senseFly Aeria X
- **Absolute X, Y, Z accuracy (RTK/PPK activated)** 1.5 cm (0.6 in)

### Flight performance

- **Cruise speed** 40-110 km/h (11-30 m/s or 25-68 mph)
- **Max wind resistance** Up to 46 km/h (12.8 m/s or 28.6 mph)
- **Landing type** Linear landing (5 m/16.4 ft accuracy in 20° angle cone)
- **Service temperature** -15° to 40°C *
- **Humidity** Light rain resistance
- **Ground avoidance** Yes - LiDAR (range 120m)

### High Precision

- **Upgradable on demand** Yes
- **RTK** Virtual Base Station, Base Station Unknown point, Base Station Known point
- **PPK** Yes
- **GNSS** GPS+GLONASS

### Maintenance and service

- **Spare Parts Available** Pitot Tubes, Wings, Propellers and vertical surfaces
- **Modular Repair** Auto Pilot Stack, Upper Body and Lower Body
- **Service** Every 100 flight hours

---

### Automatic safe return when the battery is low

**Mission**
The drone is performing its mission and capturing images

**Low endurance**
15% and below is enough to return Home and land

**Low battery**
Below 10%, it is no longer possible to continue the mission. The drone returns home to land.

---

*Working above 35°C / 95°F requires to protect the drone from the sun while on the ground.

You don’t compromise in the field - neither should your drone.

The eBee X is our most advanced fixed-wing drone that’s designed to meet all your surveying and mapping needs. Whether your project site is small or vast, straightforward or complex, the eBee X goes the distance while helping you boost the quality, efficiency and safety of your data collection.

senseFly believes in using technology to make work safer and more efficient. Our proven drone solutions simplify the collection and analysis of geospatial data, allowing professionals in surveying, mining, agriculture, engineering, environmental monitoring and humanitarian aid to make better decisions, faster.
