senseFly showcases the new eBee X fixed-wing drone in free webinar

The exclusive webinar will highlight the platform’s capabilities and feature two experienced commercial operators who were the first to use the eBee X in North America.

Cheseaux-Lausanne, Switzerland, October 30, 2018 – senseFly, the industry’s leading provider of fixed-wing drone solutions, is hosting a free educational webinar exploring its new fixed-wing drone, the eBee X, at 10:00 EST / 16:00 CET (GMT+2) on Tuesday, November 13.

François Gervaix, fixed-wing drone lead for Parrot Business Solutions, will be joined by founders of two leading North American drone service companies, Chris Healy of IN-FLIGHT Data and Scott Hiebert of Green Aero Tech, for the 45-minute live event. Together, they will discuss how they have employed the eBee X in a range of projects, from assessing open pits to flying beyond visual-line-of-sight (BVLOS) and more.

“With the eBee X, we wanted to set a new standard in mapping tools and redefine what a drone can do, so we designed it to boost the quality, efficiency and safety of data collection to meet our users’ needs,” said Gervaix. “In our webinar, geospatial professionals will get an up-close look at the eBee X and learn from experienced operators who are already flying the platform and have seen how it can be utilised to map without limits, no matter the project.”

Chris Healy, owner of Canadian drone operation IN-FLIGHT Data, is passionate about the value that BVLOS UAV flights can bring to Canadian organisations, governments and citizens alike. As the project lead for Canada’s largest ever BVLOS project, Chris and his team have successfully delivered over 2,000 km of BVLOS flights for more than 20 large Canadian and multi-national organisations.

As CEO and co-founder of Green Aero Tech, Scott Hiebert’s experiences running a multi-million-dollar investment firm allowed him to directly see and experience the opportunities that exist for UAV specialists in business, and to translate drone technology into solutions for industry. Today, Green Aero Tech is one of North America’s leading drone service companies, specialising in delivering accurate, actionable and affordable data to professionals in fields such as agriculture and oil and gas.

Webinar attendees will learn:

- What features and functionality the eBee X offers
- The drone’s endurance and accuracy options
- How high-quality data can be achieved with the eBee X’s three new proprietary cameras
- How the founders of two leading drone service companies have employed the eBee X since its launch
- Their feedback on the results and efficiency achieved

About senseFly

At senseFly, we believe in using technology to make work safer and more efficient. Our proven drone solutions simplify the collection and analysis of geospatial data, allowing professionals in surveying, agriculture, engineering and humanitarian aid to make better decisions, faster.
senseFly was founded in 2009 and quickly became the leader in mapping drones. The company is a commercial drone subsidiary of Parrot Group. For more information: www.sensefly.com

About Parrot Business Solutions
Parrot, the leading European drone group, offers business solutions spanning drones, software, sensors and services, mainly focusing on 3 major verticals:
  • Agriculture
  • 3D mapping, surveying and inspection
  • Public safety
Founded in 1994 by Henri Seydoux, the Parrot Group designs and engineers its products in Europe, mainly in France and Switzerland. Headquartered in Paris, Parrot has been listed since 2006 on Euronext Paris (FR0004038263 - PARRO). For more information: www.parrot.com
